Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	Application No.	Applicant(s)
	10/784,235	BAYLE ET AL.
	Examiner	Art Unit
	Matthew J. Merkling	1795

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

1) Responsive to communication(s) filed on 01 November 2007.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

4) Claim(s) 1-19 is/are pending in the application.

4a) Of the above claim(s) 10-19 is/are withdrawn from consideration.

5) Claim(s) \_\_\_\_\_ is/are allowed.

6) Claim(s) 1-9 is/are rejected.

7) Claim(s) \_\_\_\_\_ is/are objected to.

8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some \* c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date 2/24/04

4) Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_

5) Notice of Informal Patent Application

6) Other: \_\_\_\_\_

**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of Group I, claims 1-9 in the reply filed on 11/1/07 is acknowledged.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishii et al. (US 4,344,373).

Regarding claim 1, Ishii discloses a facility for producing synthesis gas from a solid feedstock including organic matter (see abstract),

said facility including means for circulating a heat-carrying solid providing at least some of the heat necessary for such production (such as the heat carrying sand, discussed in the abstract),

a zone Z1 (pyrolysis reactor, 11) including pyrolysis and gasification means, a zone Z2 (upper section of pyrolysis reactor, including conduit 21 extending down from pyrolysis reactor) including separation means,

a zone Z3 (reservoir, 22) including gasification means (for example, it partially combusts char sent from the pyrolysis reactor, col. 4 lines 3-6),

a zone Z4 (bottom section of vessel 19, including conduit 28 extending downward from vessel 19) including separation means, and

a zone Z5 (vessel 19) including combustion means (introduction of air, via compressor 45, and fuel, via conduit 24),

characterized in that zone Z1 has means for pyrolysis and gasification of said feedstock in a transported fluidized bed (see col. 3 lines 38-40, where a fluidized pyrolysis bed is discussed), in that zone Z2 has means for at least partial separation of the effluents from zone Z1 into an essentially gaseous phase and into an essentially solid phase (see top of pyrolysis reactor where gas is led off to separator 18, and solids are led off to zone Z3 (as discussed above) via conduit 21), in that zone Z3 (22) is supplied at least in part with said essentially solid phase (via conduit 21) and includes dense fluidized bed gasification means for (via compressor 23) gasification of said essentially solid phase (as discussed above, partial combustion of the char received from pyrolysis reactor, col. 4 lines 3-6), in that zone Z4 (bottom portion of vessel 19) includes means for separating the effluents coming from zone Z3 into an essentially gaseous phase (which is led off to separator 29) and into an essentially solid phase (which is sent through conduit 28), and in that zone Z5 includes means for combusting the essentially solid phase coming from zone Z3 (char coming from 'gasifier' 22 is completely combusted in combustion zone 19, see col. 4 lines 3-6) and means for transferring

the heat-carrying solid coming from said combustion into zone Z1 (via conduit 28).

Regarding limitations recited in claim 1 which are directed to a manner of operating disclosed system, neither the manner of operating a disclosed device nor material or article worked upon further limit an apparatus claim. Said limitations do not differentiate apparatus claims from prior art. See MPEP §2114 and 2115. Further, process limitations do not have a patentable weight in an apparatus claim. See *Ex parte Thibault*, 164 USPQ 666, 667 (Bd. App. 1969) that states "Expressions relating the apparatus to contents thereof and to an intended operation are of no significance in determining patentability of the apparatus claim.

Regarding claim 2, as discussed above, Ishii discloses a means for combusting the solid phase coming from zone Z4 (char coming from 'gasifier' 22 is completely combusted in combustion zone 19, see col. 4 lines 3-6), and also discloses a means (41, 42) for transferring solids to zone Z5 (combustor, 19).

Regarding claim 3, Ishii further discloses said pyrolysis/gasification zone Z1 (pyrolysis reactor, 11) includes means for supplying a reactive carrier gas (via compressor 43), means for introducing said feedstock (feeder, 16, col. 3 lines 49-51), and means for injecting the heat-carrying solid (via conduit 28, col. 4 lines 23-28).

Regarding claim 4, Ishii further discloses said combustion zone Z5 has means for introducing an oxidizing gas (via compressor 45) and means for transferring the heat-carrying solid coming from said combustion, to zone Z1 (via conduit 28).

Regarding claim 5, Ishii further discloses means for transferring the essentially gaseous phase coming from zone Z2 (upper portion of pyrolyzer 11), to separation zone Z4 (bottom portion of combustor 19, via separator 18).

Regarding limitations recited in claim 5 which are directed to a manner of operating disclosed system, neither the manner of operating a disclosed device nor material or article worked upon further limit an apparatus claim. Said limitations do not differentiate apparatus claims from prior art. See MPEP §2114 and 2115. Further, process limitations do not have a patentable weight in an apparatus claim. See *Ex parte Thibault*, 164 USPQ 666, 667 (Bd. App. 1969) that states "Expressions relating the apparatus to contents thereof and to an intended operation are of no significance in determining patentability of the apparatus claim.

Regarding claim 6, Ishii further discloses said zone Z5 includes:

- a first zone Z5 (middle section of combustor 19) including transported fluidized bed combustion means (via air compressor 45) for combusting part of the essentially solid phase coming from zone Z3 and/or Z4 (coming from separation 18, separator 40, or conduit 24),
- a zone Z6 for separating the gaseous phase (separator 29) and the essentially solid phase coming from said combustion (gas is led off to separator 30, and solids are led off to hopper 31, see Fig. 3),
- a zone Z7 including dense fluidized bed combustion means (such as combustion in hopper 31) for combusting the essentially solid phase coming from

zone Z6 and means for transferring the heat-carrying solid coming from said combustion, to zone Z1 (via conduit 28).

Regarding limitations recited in claim 6 which are directed to a manner of operating disclosed system, neither the manner of operating a disclosed device nor material or article worked upon further limit an apparatus claim. Said limitations do not differentiate apparatus claims from prior art. See MPEP §2114 and 2115. Further, process limitations do not have a patentable weight in an apparatus claim. See *Ex parte Thibault*, 164 USPQ 666, 667 (Bd. App. 1969) that states "Expressions relating the apparatus to contents thereof and to an intended operation are of no significance in determining patentability of the apparatus claim.

Regarding claim 7, Ishii further discloses zone Z3 includes reactive carrier gas supply means (via pump 23).

Regarding claim 8, Ishii further discloses zone Z3 includes means for introducing the feedstock (via conduit 21).

Regarding claim 9, Ishii further discloses said zone Z5 (combustor 19) includes means for supplying an additional fuel (for example, through feeder 20).

### **Conclusion**

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew J. Merkling whose telephone number is (571) 272-9813. The examiner can normally be reached on M-F 8:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Alexa Neckel can be reached on (571) 272-1446. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
